Walter Dalla Torre Neto

Senior Software Engineer & Systems Architect

Software Architect and Backend Engineer with 6+ years building high-performance systems in .NET, Java and Node.js, managing cloud infrastructure on AWS and Azure, and implementing observability in regulated financial environments. Track record of cutting AWS costs by 23%, reducing delivery SLA from 7 to 1 day, and mentoring developers. Currently applying AI-driven engineering workflows (Claude, Codex) to accelerate software delivery.

Walter-Dalla

SKILLS

.NET CORE | C# | Java | Node.js | Microservices Architecture | Design Patterns | AWS | Azure | Kubernetes (AKS/EKS) | Docker | Terraform | CI/CD (Azure DevOps, GitHub Actions) | RabbitMQ | Kafka | Redis | PostgreSQL | SQL Server | MySQL | MongoDB | DynamoDB | DataDog | Splunk | Performance Optimization | AI Agent Orchestration (Claude, Codex)

WORK EXPERIENCE

Senior Software Engineer & Systems Architect

Walter Serviços de Arquitetura de Software LTDA (own consultancy) — Clients: Qyon, AgileEngine

Clients: Qyon (Systems Architect & DevOps, Sep 2025–May 2026) and AgileEngine, US (Senior AI-Oriented Fullstack Developer, Jul 2026–present)

Sep, 2025 - Present | Remote

- **Qyon:** Consolidated 8 near-identical microservices into a single service (Strategy and Template Method patterns), migrating from .NET Core 3.1 to .NET 10: more than doubled queue throughput, reduced memory usage and cut deployment from 8 pods to 1.
- **Qyon:** Managed the full AWS infrastructure and 6 RDS databases in a high-security regulated environment; cut AWS costs by 23%, largely through reserved instances.
- **Qyon:** Redesigned the processing architecture to absorb a new client whose daily volume exceeded twice the company's previous total; introduced RabbitMQ Shovel into the messaging workflow.
- **Qyon:** Optimized critical Java and C# applications and tuned PostgreSQL/MySQL, reducing memory and CPU usage.
- **Qyon:** Established Claude Code and Cursor rule sets (CLAUDE.md, coding standards) adopted by a team of 20+ developers.
- **AgileEngine:** Designed and implemented a custom AI orchestration harness that runs programmatic skills concurrently across multiple tasks, enabling parallelized development of healthcare software.
- **AgileEngine:** Built end-to-end AI-driven engineering workflows (analysis, planning, implementation, testing, deployment) with Claude and Codex agents, on Azure DevOps and Azure Cloud.

WORK EXPERIENCE

Senior Development Analyst & Systems Architect

BTG Pactual (Brazilian Investment Bank)

Joined via Act Digital as Mid-Level Backend Developer (fraud prevention); hired directly as Senior in Mar 2025

Nov, 2023 - Aug, 2025 | São Paulo-SP

- Led the technical delivery of the PIX latency-reduction project (myself and 2 mid-level developers), designing the architecture and validating it with the bank's architecture team; reduced P95 latency of the fraud-prevention flow from ~7s to ~4.5s to meet the new BACEN 5s limit.
- Designed a custom timeout/fallback mechanism using concurrent threads, replacing the imprecise HttpClient timeout and enabling deterministic degradation paths for PIX and TED transactions during external vendor failures.
- Cut infrastructure cost and latency by migrating AWS Lambdas to native EKS CronJobs, replacing a queue relay job with RabbitMQ Shovel and adding Redis caching to eliminate redundant HTTP calls.
- Implemented full observability with DataDog (dashboards, alerts, Command Center integration), reducing incident MTTR in critical systems.
- Reduced team delivery SLA from 7 days to 1 through process optimization and automation.
- Developed .NET backend services for the fraud-prevention department, migrating the stack from .NET Core 3.1 to 6 and later 8.
- Mentored 4 new developers and established a unit testing culture, reducing production defects.

Mid-Level Development Analyst (C# Backend)

Linx (Stone Group) - Retail & Food software

Analyst Developer I, II; focal point of the C# backend team on the new Point of Sale ecosystem

Sep, 2021 - Nov, 2023 | Remote/Bauru-SP/São Paulo-SP

- Designed the offline-first architecture of the new Point of Sale platform (local persistence when offline, sync on reconnection), with fiscal integration (NFe, SAT) and high-availability focus.
- Re-architected the C# backend: removed an unreliable state machine, rationalized message-queue usage and standardized design patterns; upgraded from .NET Core 3.1 to .NET 5 and later .NET 8.
- Modeled and managed the full Azure infrastructure: SQL Database, AKS (Kubernetes), Application Insights and CI/CD pipelines for dev, test and production.
- Implemented complex business rules, including graph-based routing (VRP), and third-party integrations (promo codes, fiscal APIs) using .NET and MongoDB.
- Trained 4 new developers; defined coding standards, PR review and Git Flow practices.

Software Developer

Ez.Devs (software outsourcing)

Fullstack and backend projects, last 7 months allocated to Linx's R&D team

Sep, 2020 - Oct, 2021 | Remote

- Built a fullstack foodservice web application with Node.js, React and PostgreSQL.
- Completed and refactored a late-stage Angular frontend, improving stability and code standardization.
- At Linx (R&D, Food division): developed KDS, order panels and business rules in C# ASP.NET MVC with MongoDB, integrating third-party APIs.

Backend Intern

Assertiva

Oct, 2018 - Sep, 2019 | Campinas-SP

- Built integrations with external providers (SMS, PBX, credit bureaus) in Java and T-SQL, ensuring resilient communication between systems on AWS with SQL Server and PostgreSQL.
- Worked on Big Data pipelines: ingestion, cleaning and analysis of large datasets.

EDUCATION

Bachelor's Degree in Information Systems
UNESP (São Paulo State University)
Jan, 2020 - Dec, 2024 | Bauru-SP

- Equivalent to Computer Science.

Technical Degree in IT (Software)
COTIL / UNICAMP (State University of Campinas)
Jan, 2017 - Dec, 2019

PERSONAL PROJECTS

Tool for insect behavioral analysis
Jan, 2024 - Present

- Image analysis software for insect behavior, in production use by 3 pharmacology labs at UNICAMP.
