Walter Dalla Torre Neto

Senior Software Engineer & Systems Architect

Software Architect and Fullstack Engineer with 7+ years building high-performance systems in .NET, Java and Node.js on AWS and Azure, including regulated financial environments. At BTG Pactual, was the technical focal point for cutting the bank's fraud-screening latency on PIX (Brazil's instant-payment system) by ~36%, bringing it within the Central Bank's new limit. Now building production software with AI agents (Claude, Codex), grounded in robust architecture and engineering standards.

SKILLS

.NET | C# | Java | Node.js | React | Angular | Microservices Architecture | AWS | Azure | Kubernetes (AKS/EKS) | Docker | Terraform | CI/CD (Azure DevOps, GitHub Actions) | RabbitMQ | Kafka | Redis | PostgreSQL | SQL Server | MySQL | MongoDB | DynamoDB | DataDog | Splunk | AI Agent Orchestration (Claude, Codex)

WORK EXPERIENCE

Senior AI-Oriented Fullstack Developer

AgileEngine (US)

Contract, via own consultancy (Walter Serviços de Arquitetura de Software LTDA); client details under NDA

Jul, 2026 - Present | Remote

- Designed and implemented a custom AI orchestration harness that runs programmatic skills concurrently across multiple tasks, enabling parallelized development.
- Built end-to-end AI-driven engineering workflows (analysis, planning, implementation, testing, deployment) with Claude and Codex agents, on Azure DevOps and Azure Cloud.

Systems Architect & DevOps

Qyon

Sole architect, also covering DevOps and FinOps; contract via own consultancy (Walter Serviços de Arquitetura de Software LTDA)

Sep, 2025 - May, 2026 | Remote

- Consolidated 8 near-identical microservices into a single service (Strategy and Template Method patterns) and migrated it from .NET Core 3.1 to .NET 10, more than doubling queue throughput and reducing memory usage.
- Redesigned the processing architecture, introducing RabbitMQ Shovel into the messaging workflow, to absorb a new client whose daily volume exceeded twice the company's previous total.
- Managed the full AWS infrastructure and 6 RDS databases in a high-security regulated environment, cutting AWS costs by 23%.
- Optimized critical Java and C# applications and tuned PostgreSQL/MySQL, reducing memory and CPU usage.
- Established Claude Code and Cursor rule sets (CLAUDE.md, coding standards) adopted by a team of 20+ developers.

Senior Software Engineer & Systems Architect

BTG Pactual (Brazilian Investment Bank)

Mid-Level Backend Developer, fraud prevention (via Act Digital), from Nov 2023; hired directly by the bank and promoted to the architecture team in Mar 2025 after delivering the fraud-prevention side of the PIX latency project

Nov, 2023 - Aug, 2025 | São Paulo-SP

- Led the fraud-prevention side of BTG's PIX latency-reduction effort (PIX is Brazil's instant-payment system) as technical focal point: designed the architecture, validated it with the bank's architecture team and delivered it with 2 mid-level developers, cutting P95 latency of the fraud-screening flow from ~7s to ~4.5s, within the Central Bank's (BACEN) new 5s limit.
- Designed a custom timeout/fallback mechanism that guarantees a deterministic response within the deadline even when an external vendor hangs, enabling controlled degradation paths for PIX and TED (wire transfer) transactions.
- Migrated AWS Lambdas to native EKS CronJobs, replaced a queue relay job with RabbitMQ Shovel and added Redis caching to eliminate redundant HTTP calls, cutting infrastructure cost and latency.
- Implemented full observability with DataDog (dashboards, alerts, Command Center), reducing incident MTTR in critical systems.
- Developed .NET backend services for the fraud-prevention department, migrating the stack from .NET Core 3.1 to 6 and later 8.
- Optimized and automated the team's delivery process, reducing delivery SLA from 7 days to 1.
- Mentored 4 new developers and established a unit testing culture, reducing production defects.

WORK EXPERIENCE

Mid-Level Software Engineer (C# Backend)

Linx (Stone Group) - Retail & Food Software

Promoted from Software Engineer I to II; focal point of the backend team on the new POS ecosystem for Brazilian food chains (Habib's, Bob's, Rei do Mate)

Oct, 2021 - Nov, 2023 | Remote/Bauru-SP/São Paulo-SP

- Designed the offline-first architecture of the new Point of Sale platform (local persistence when offline, sync on reconnection), integrated with Brazilian electronic tax-invoice systems (NFe, SAT) and built for high availability.
- Gathered requirements directly with client CEOs and CTOs and visited customer sites to understand day-to-day operations, turning business needs into the technical design of the new POS platform.
- Re-architected the C# backend, removing an unreliable state machine, rationalizing message-queue usage and standardizing design patterns, and upgraded it from .NET Core 3.1 to .NET 5.
- Modeled and managed the full Azure infrastructure: SQL Database, AKS (Kubernetes), Application Insights and CI/CD pipelines for dev, test and production.
- Implemented complex business rules, including graph-based routing (VRP), and third-party integrations (promo codes, fiscal APIs) using .NET and MongoDB.
- Trained 4 new developers and defined coding standards, PR review and Git Flow practices.

Software Developer

Ez.Devs (Software Outsourcing)

Delivered projects for 3 different clients, including 7 months embedded in Linx's R&D team

Sep, 2020 - Oct, 2021 | Remote

- **Linx (R&D, Food division):** developed a Kitchen Display System (KDS), order panels and business rules in C# ASP.NET MVC with MongoDB, integrating third-party APIs.
- **Corporate training client:** built an internal training platform as a fullstack web application with Node.js, React and PostgreSQL.
- **State government of Mato Grosso do Sul (Brazil):** stabilized a late-stage Angular frontend, fixing defects and standardizing the codebase.

Backend Intern

Assertiva

Oct, 2018 - Sep, 2019 | Campinas-SP

- Built two company-wide internal services: the health-check system monitoring the company's applications, and the shared email module used by all teams.
- Integrated external providers (SMS, PBX, credit bureaus) in Java and T-SQL, on AWS with SQL Server and PostgreSQL.

EDUCATION

Bachelor's Degree in Information Systems (Computer Science-equivalent)

UNESP (São Paulo State University)

Jan, 2020 - Dec, 2024 | Bauru-SP

Undergraduate thesis: Tool for Insect Behavioral Analysis

Image analysis software for insect behavior, in production use by 3 pharmacology labs at UNICAMP. View Paper

Technical Degree in IT (Software)

COTIL / UNICAMP (State University of Campinas)

Jan, 2017 - Dec, 2019 | Limeira-SP

PROJECTS

walterdalla.uk

- **Wh-harness** (Python, Claude Code): open-source plugin that takes a software task from request to pull request (analysis, plan, parallel agents, QA, retrospective) in any repository.
- **GoPrint - AndelphGroup** (.NET 10, PostgreSQL, React, Docker): B2B SaaS for printer-repair tickets, in production at AndelphGroup serving multiple client companies.
- **Nesse Capítulo** (React 19, TypeScript, Node 24, SQLite): reading tracker on Google Play (PWA + TWA), with Google OAuth, social features, Google Books + Open Library integration with fallback, rate limiting, i18n, full test suite and CI.
